

Skoola

B2B School Administration & Management SaaS

PLATFORM FEATURES REFERENCE GUIDE

CONFIDENTIAL PRODUCT MANUAL

For System Administrators, Registrars, and Financial Officers

Proprietor: Mr. Oheneba Michael Baah
Company: Oheneba Media | Product Support: support@skoola.com
Date of Publication: July 2026 | Version: 1.0 (Enterprise Release)

SECTION 1

INTRODUCTION & SCOPE

This features guide details the capabilities of the Skoola school administration software as of the July 2026 enterprise release. Skoola is built on a high-availability, multi-tenant SaaS architecture, enabling individual academic institutions to deploy custom subdomains, manage complex grading and reporting schemes, control financial invoicing, run online assessments, and interact with AI-assisted administrative tooling.

SECTION 2

CORE SYSTEM MODULES

The platform organizes educational operations into four main functional blocks, which can be fully enabled or disabled by the Super Admin in the central licensing panel:

- 1. Academic & Student Control:** Enrollment, course scheduling, smart timetables, class assignments, and card printing.
- 2. Assessment & Grading:** Report cards, exam schedulers, remarks templates, grading rules, and academic transcripts.
- 3. Business Office:** Fee structures, daily collection registry, invoices, sellable inventory, and receipts.
- 4. Human Resources & Payroll:** Salary computation, leave approvals, attendance logs, and recruitment tracking.
- 5. Interactive E-Learning:** Computer Based Testing (CBT), study material storage, assignments, and digital classrooms.
- 6. Security & Whistleblowing:** Anonymous reporting, event logging, auditing, and platform security tools.

SECTION 3

ACADEMICS & STUDENT ADMINISTRATION

The Academics module forms the foundation of class organization, student registers, and daily campus logistics. All student directories dynamically link with billing and testing logs.

Student Management:	Register students, maintain personal information, view histories, and track status (Active, Alumni, Withdrawn).
Class Management:	Group students, assign classroom teachers, and define rank orders for promotions.
Subject Management:	Create courses and assign academic subjects directly to teaching staff or class blocks.
Smart Timetable:	An automated scheduling engine that schedules classes, rooms, and staff without conflicts.
QR Attendance:	Generates student-specific barcodes/QR codes that teachers can scan to log attendance.
Student ID Cards:	Select students in bulk to format, preview, and print standardized student ID badges.
Campus Photo Gallery:	Allows staff to publish school-wide gallery images and organize them into public albums.

SECTION 4

ASSESSMENT, GRADING & REPORTING

The Assessment system handles grade entries, exam scheduling, and official academic records. It supports complex scaling of marks and customizable template outputs.

Exam Schedules:	Create examinations, allot dates, configure times, and specify testing rooms.
Results Management:	Allows teachers to record class assessment scores (CA) and end-of-term exam marks.
Grading Scale rules:	Customize grade ranges (e.g. A, B, C) and minimum scores tailored to specific classes.
Report Card Builder:	Customize report card templates by dynamically toggling grids, logos, and signatures.
Remarks Template:	Provides templates of standardized teacher and principal comments to speed up report preparation.
Academic Transcripts:	Enables School Admins to generate official multi-term transcripts for selected students.
Public Report Portal:	Access and check report card records publicly using secure, expiring download links.

SECTION 5

BUSINESS OFFICE, FINANCE & HR

The Business Office manages financial auditing, inventory, and staff rosters. It integrates billing directly with academic registers.

Fees & Invoices:	Create fee structures (tuition, meals, sports) and assign them to specific classes or students.
Daily Collections:	Track cash, check, and digital payment receipts in a real-time ledger.
Stocks & Inventory:	Sellable item logs for textbooks, uniform sizes, and other campus inventory.
Staff Payroll:	Generate monthly salary computation reports for teaching and non-teaching personnel.
Leave Requests:	Approve, track, and record leave applications with defined vacation limits.
Recruitment Logs:	Manage job applications, schedule interviews, and transition recruits to active staff.
Exit Management:	Document resignations, terminations, clear handovers, and close system accounts.

SECTION 6

CBT, SECURITY & ARTIFICIAL INTELLIGENCE

Advanced modules designed for modern digital testing, high-level administrative audit security, and automated tasks powered by artificial intelligence.

- Computer Based Testing:** Create online exams with timers, multiple choice, or short-answer question sheets.
- Whistleblower Portal:** A highly secure anonymous portal enabling students or parents to report behavior incidents.
- Platform Audit Logs:** Records every administrative action, update, delete, login IP, and timestamp for auditing.
- Skoola AI Assistant:** Automates summary reports, analyzes student performance, and helps draft curriculum documents.
- Digital Signatures:** Upload administrative signatures to authorize transcripts and report cards automatically.
- Subdomain Branding:** Set customized landing page details, gallery showcases, and brand colors per institution.
